SYNAPSIO

The autonomous supply chain manager and ERP for SMEs.

For manufacturers and distributors with up to 249 employees that run their own inventory. Synapsio holds the stock, the orders and the bills of materials, decides what to order, when and from whom, and places the order.

PRE-SEED · OCTOBER 2026 · CONFIDENTIAL

SYNAPSIO.SOLUTIONS

BACKED BY 23DGTL

In SMEs, every reorder is still made by hand.

ERP systems record what happened. When, how much and from whom to reorder is decided by a person, again and again, for the same parts.

55%

of EU companies with 10 to 249 employees work without an ERP

One buyer, a spreadsheet, and the same parts ordered again and again.

EUROSTAT 2025

€121.75

for a single purchase order, in staff, IT and process

From the request to the checked invoice, every order passes through people, again and again.

BME BENCHMARK 2025

€22–100K

a year for a cloud ERP with 20 to 50 users

Licence only, before implementation. It still does not decide anything.

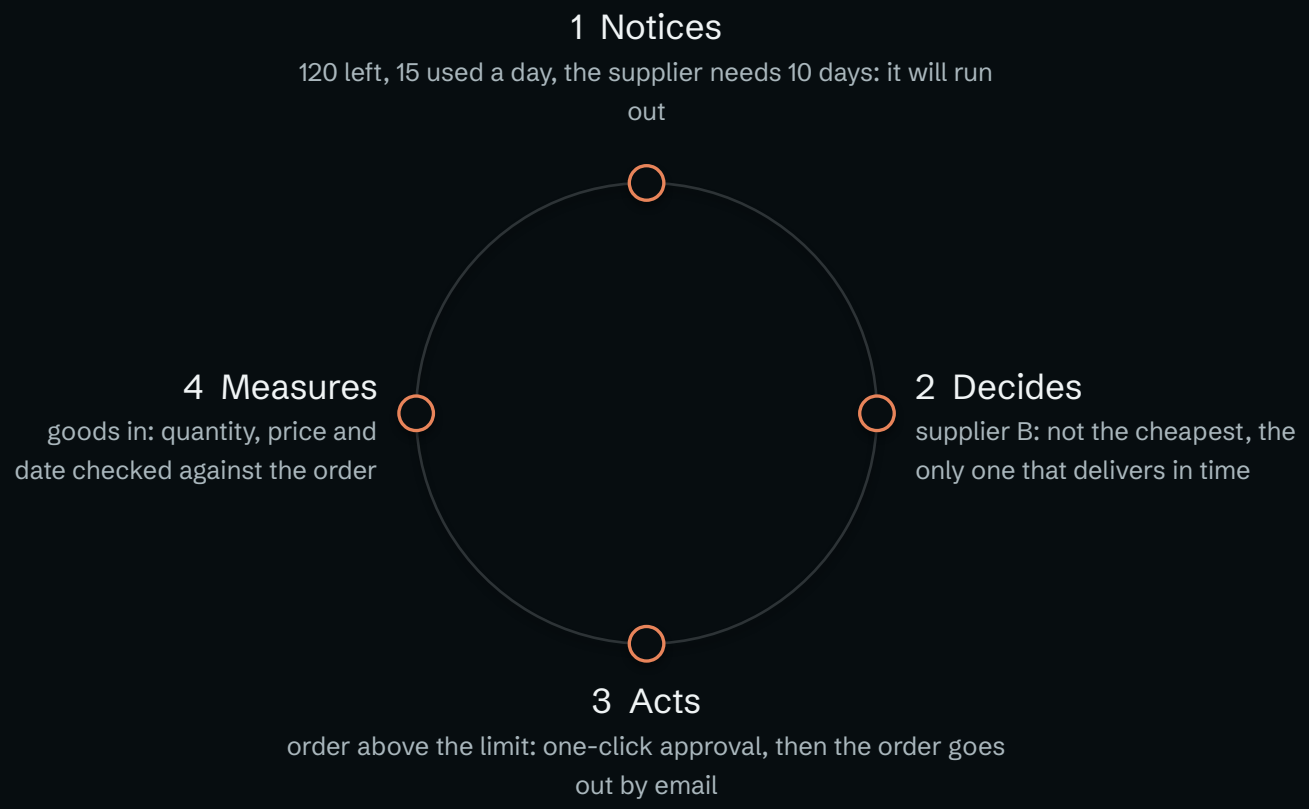

ERP-SOFTWARE.ORG 2026

The result: overstock, stockouts and no time to react when a supplier slips.

SYNAPSIO

From low stock to goods received: the AI runs every step.

EXAMPLE · ONE PART, ONE REORDER

WHAT IT DOES TODAY

Procurement	picks supplier and quantity, orders, chases delays
Stock	plans replenishment, books goods-in, counts, transfers
Production	explodes bills of materials, plans runs, books usage
Invoices	checks every line, records returns
Documents	reads a photo of the delivery note, prepares goods-in

Fixed formulas do the maths. The AI decides within limits it has earned.

5 Act and measure	It orders, books and writes, then checks the result: did it work?
4 Limits	Each area has an autonomy level. Money, bank details and deletions always need a person.
3 Judge	The AI may raise or lower a result, at most to double or half, and must write down why.
2 Calculate	Reorder point, safety stock and order quantity from fixed formulas: same input, same answer.
1 Data	Stock, orders, bills of materials, contracts. Each company's data kept apart.

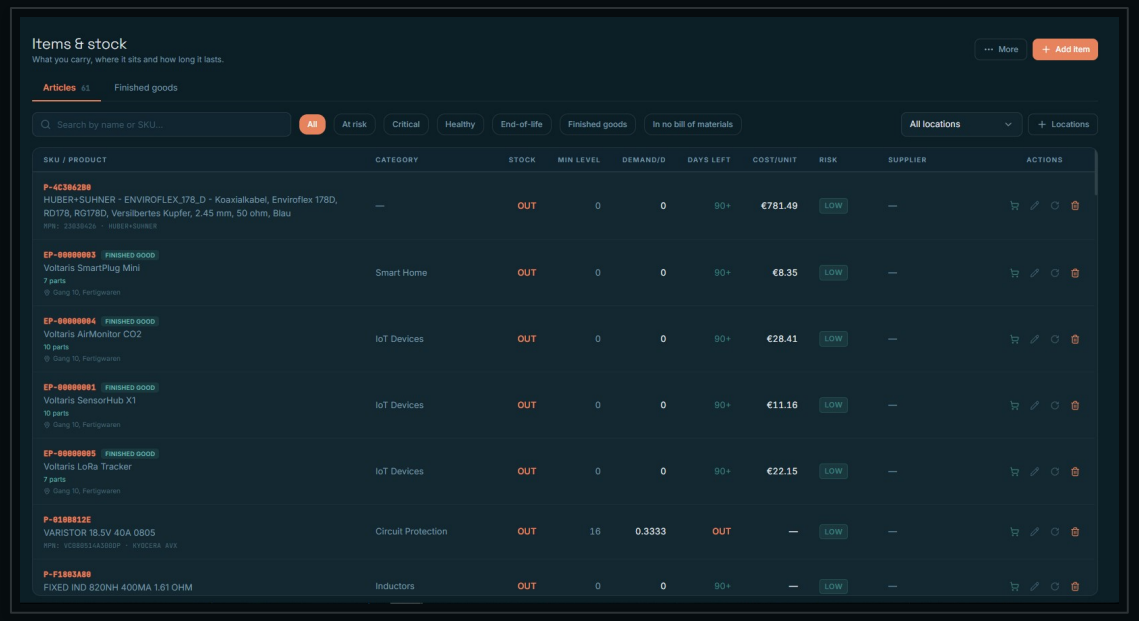

HOW IT EARNS TRUST

- Up one level after 20 good results and 14 days; down at once after one bad outcome
- Every decision is scored afterwards against what really happened
- A sequence it repeats becomes its own tool, tested before it may run
- The model sits behind one layer and can be swapped: the base for our own model

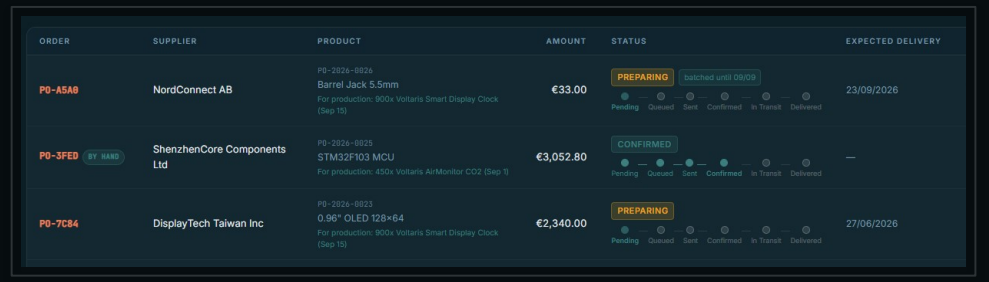

The answer to “what if the AI gets it wrong?”, before the question is asked.

The product is live at app.synapsio.solutions.

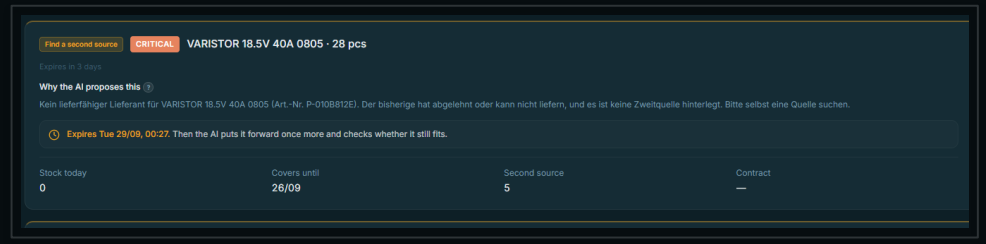

Onboarding starts with an Excel export from the old system, without an integration project.

STOCK: RISK PER ITEM AT A GLANCE

ORDERS IT PLACES AND FOLLOWS UP

APPROVAL WITH A DEADLINE AND A DEFAULT

Database in the EU · German and English · Isolated per company at database level · Every AI action logged with its reason

AI got cheap enough to act, just as supply got harder.

~40×	cheaper AI, every year EPOCH AI, MAR 2025	The price of GPT-4-level answers fell about 40-fold a year (9- to 900-fold, depending on the task). An AI that acts is now affordable for a 30-person company.
13.8%	of German industry short of materials IFO, APR 2026	In April 2026, up from 5.8% in January: shortages more than doubled in four months. Each one is a reorder decision someone has to get right.
51%	of SMEs plan to change suppliers DZ BANK, N > 1,000, AUTUMN 2025	They want to buy closer to home, which means new suppliers to find, qualify and manage.

The funded purchasing agents sell to companies that already run SAP. Companies still on Excel have no AI that orders for them yet.

Today an SME chooses between three compromises.

ERP systems

SAP · ODOO

- Record what happened, decide nothing
- Every order placed by a person
- Months of implementation

Agents on an ERP

OPUS · MERCANIS

- Need an ERP underneath
- Act on parts of the process, not the whole
- Sold to companies that already run SAP

Procurement suites

TACTO · COUPA

- Procurement only: no stock, no production
- Need an ERP underneath
- Built for departments, not for one buyer

Synapsio combines what each of them only half does.

SYNAPSIO

VS. ERP SYSTEMS

- ✓ Decides and acts on its own
- ✓ Orders alone, once it has earned it
- ✓ Starts from an Excel export

VS. AGENTS ON AN ERP

- ✓ Is the system: holds stock, orders, BOMs
- ✓ Runs the whole loop, notice to measure
- ✓ Built for SMEs, not for corporate groups

VS. PROCUREMENT SUITES

- ✓ Procurement, stock and production in one
- ✓ No ERP needed underneath
- ✓ Built for one buyer, not a department

Investors are funding AI-native ERP right now: Rillet and Campfire raised over $100M each in under a year, both for US finance teams. Nobody builds it for the operations of European SMEs.

RILLET, GLOBENEWSWIRE AUG 2025 · CAMPFIRE, PR NEWSWIRE OCT 2025

Procurement is the way in. The whole operation is the goal.

TODAY
live

Procurement, stock, production, invoice checks

NEXT
month 0–3

Sales side: customer orders, delivery-date promises; logistics across sites

THEN
month 3–6

Money view and pre-accounting: e-invoices, handover to the tax adviser

AFTER
from month 6

Sales and operations planning, compliance, capacity

Each step takes over a larger part of the business, and the AI already knows the company when it gets there.

Over 300,000 companies in Germany and Austria run their own inventory. A market of over €1B a year.

BOTTOM-UP · COUNTED, NOT SCALED

Manufacturers without food	60,000
Wholesalers all trades	28,000
Specialist retailers with stock jewellery and watches, electronics, household, leisure, mail order	32,000
10–249 staff: 120,000 × €4,848 blended price: 45% Start · 40% Base · 15% Advanced (assumption)	€580M
2–9 staff: 193,000 × €2,388 wholesale and retail at the Start price; Eurostat does not publish small manufacturers	€460M
Market, Germany and Austria	over €1B

PER MONTH, NET Start €199 Base €449 Advanced €899 Enterprise on request

built in

fee per order · no figure until orders run through it

Three founders: engineering, market and supply chain practice.

We build the thing we sell, with someone who has run it.

Jakob Ibrahim

CEO

Builds the product and the AI: database, agents, interface. Wrote the platform on his own.

CS STUDENT, TU BERLIN

Luis Boy

CCO

Runs sales and customer conversations: wins the first customers and brings back what customers need.

BUSINESS STUDENT, HWR BERLIN

Arne Schildmeyer

COO

10+ years of international supply chain management, including Heineken and Stone Brewing. Combines operations with digitalisation and automation.

B.A. BUSINESS, TH WILDAU

Germany and Austria first. Then the EU, country by country, following demand.

THIS ROUND · €440K

month 0–18

SEED ROUND

from month 18

Germany and Austria

over 300,000 companies · over €1B

10–249 AND 2–9 STAFF · EUROSTAT 2023

month 3	Sales lead on board, first companies using it
month 6	First paying customers
month 12	10 paying customers
month 18	20 paying customers, ~€100K ARR · seed round

European Union

over 1.7M companies · over €5B

INCL. DE + AT · EUROSTAT 2023

No fixed order of countries: we go where demand and partners are. The software already runs in German and English.

We set targets only up to month 18. What comes after depends on the customers we win by then.

€440K

The product is built. What we lack is reach: SME buyers are won through networks and visits on site, not cold emails. This round pays for that reach.

INSTRUMENT	Convertible loan
TERMS	€2M cap · 20% discount · min. ticket €25K
RUNWAY	18 months: ~€22K/month spend + €45K reserve
MILESTONE	20 paying customers, ~€100K ARR

USE OF FUNDS

27%	Product and engineering
50%	Sales and supply chain team
6%	AI and infrastructure
16%	Legal, finance, reserve

WHERE WE ARE

- Product live, used on real data in a test company
- In talks with 2 companies about a first rollout
- Founders take no salary from this round

Who else works on this, and where Synapsio differs.

COMPANY	WHAT IT IS	CUSTOMERS	ERP NEEDED?	FUNDING
Synapsio	Autonomous SCM + ERP: decides and orders	SMEs up to 249 employees, DE/AT	no, is the system	pre-seed
SAP B1 · Odoo	ERP: records; a person decides and orders	SMEs, worldwide	is the ERP	public / established
Xentral	Cloud ERP for SMEs, e-commerce and B2B trade	SMEs, DACH	is the ERP	~$95M (Series B 2021)
DOSS	AI-native ERP / operations platform	US mid-market consumer goods	is the ERP	$18M A (2025) + $55M (2026)
opus	AI agents for purchase-to-pay on top of the ERP	German industry on SAP/Dynamics	yes	$6M
Didero	AI procurement agents inside email and ERP	US manufacturers, distributors	yes	$30M A (2026), ~$37M total
Tacto	Procurement platform with AI for industry	mid-sized manufacturers, DACH	yes	€50M A (2023)
Mercanis	Agentic procurement suite	enterprises (BASF Coatings, Brose)	yes	>$20M A (2025)
Netstock	Inventory planning on top of the ERP	SMBs, ~2,400 customers	yes	n/a

COMPANY WEBSITES AND FUNDING ANNOUNCEMENTS: TECH.EU DEC 2023 · GLOBENEWSWIRE JUN 2025 · BUSINESSWIRE APR 2025 TECHCRUNCH MAR 2026 · PR NEWSWIRE FEB 2026 · XENTRAL.COM · NETSTOCK.COM · AS OF SEPTEMBER 2026

opus automates the purchasing process. Synapsio makes the purchasing decision.

COMPANY	opus, Berlin · founded 2024
FUNDING	$6M · Project A, Speedinvest, Sequoia Scouts
PRODUCT	AI agents for purchase-to-pay, from requisition to invoice
CUSTOMERS	German industry on SAP, Dynamics, Oracle, Infor, proALPHA
GO-LIVE	4 weeks, with a deployment lead per customer · price on request

WHERE THEY ARE STRONG

- Reference customers in production: EnviroChemie, Bauer, Heye
- SOC 2, ISO 27001 and GDPR shown as active
- Deep integration into the large ERP systems
- A concrete promise: live in four weeks

HOW SYNAPSIO DIFFERS

- The need comes from outside: a person raises the request
- No demand planning, safety stock or reorder point on its site
- Needs an ERP underneath; Synapsio is the system
- A deployment lead per customer only pays off at enterprise deal size

Overlap is in execution: quotes, confirmations, chasing. A company that can buy opus already runs SAP, and is not our customer.

OPUS-TECH.AI, AS OF OCTOBER 2026 · FUNDING: COMPANY ANNOUNCEMENT

SAP Business One records the business. A person still runs it.

REACH	83,000+ customers in 170 countries, ~3,000 new a year
SOLD BY	850 partners, who also implement it
LICENCE	~€90–110 per professional user and month, cloud
GO-LIVE	8–10 weeks for small standard projects, often months
TOTAL COST	15 users over 5 years: low to mid six figures

WHERE THEY ARE STRONG

- The brand: a safe choice for any managing director
- A partner on site in every region
- Complete ERP: finance, sales, purchasing, stock, production
- Finance and sales are ahead of us; both are on our path

HOW SYNAPSIO DIFFERS

- Its planning suggests orders; a person converts and sends each one
- Synapsio decides and orders on its own, within earned limits
- Starts from an Excel export, not a partner project
- Priced by items managed, not by seats

We do not replace a B1 that runs well. We win the companies still on Excel, before a partner sells them an ERP.

SAP NEWS, DEC 2025 · ERP-SOFTWARE.ORG, SAP BUSINESS ONE COSTS 2026

What Amazon did for consumers, we build for SME purchasing.

PLAN

Native app

For the floor: scan, photograph the delivery note, approve on the move.

PLAN

Marketplace

Find suppliers, order and pay through Synapsio. Every new company brings its suppliers.

PLAN

AI to AI

One company's buying AI negotiates with another's selling AI, within limits both set.

PLAN

Our own model

Trained on every decision and its outcome. No AI provider can replace us with a feature.

The marketplace is the upside, not the premise: the subscription case stands without it.

SYNAPSIO

Of over 300,000 companies, about 230,000 work without an ERP. That is where the need is greatest.

MARKET

over 300,000 companies

over €1B

Germany and Austria, 2–249 staff, running their own inventory

OF WHICH WITHOUT AN ERP

about 230,000 companies

over €700M

10–249 staff: about 70,000 · 2–9 staff: about 160,000

OUR GOAL · MONTH 18

20 paying customers

~€100K ARR

from this round's budget, not from a market share

HOW IT IS COUNTED

- Companies per size class and country × the share without an ERP in exactly that size class
- Without an ERP, 2025: 10–49 staff Germany 63%, Austria 69% · 50–249 staff Germany 32%, Austria 34%
- 2–9 staff: 82% without an ERP (Germany 2023); not published for Austria, same share assumed
- Companies with an ERP stay in the market; this step only shows where the need is greatest
