

The AI that runs procurement, stock and production.

AI-native supply chain management for the Mittelstand. Synapsio holds the stock, the orders and the bills of materials, and decides what to order, when and from whom.

PRE-SEED • SEPTEMBER 2026

SYNAPSIO.SOLUTIONS

In the Mittelstand, every reorder **is still made by hand.**

ERP systems record what happened. When, how much and from whom to reorder is decided by a person, again and again, for the same parts.

465,000

manufacturers and wholesalers in the EU with 10 to 249 employees

One buyer, a spreadsheet, and the same parts ordered again and again.

EUROSTAT 2023

€121.75

for a single purchase order, in staff, IT and process

At, say, 100 orders a month that is €12,175, every month, for work a system can do.

BME BENCHMARK 2025

€22-100K

a year for a cloud ERP with 20 to 50 users

Licence only, before implementation. It still does not decide anything.

ERP-SOFTWARE.ORG 2026

The result: **overstock, stockouts and no time to react** when a supplier slips.

Three founders: engineering, market and supply chain practice.

We build the thing we sell, with someone who has run it.

Jakob Ibrahim

CO - FOUNDER

Builds the product and the AI: database, agents, interface. Wrote the platform on his own.

COMPUTER SCIENCE, TU BERLIN

Luis Boy

CO - FOUNDER

Runs sales and customer conversations: wins the pilots and brings back what customers need.

BUSINESS STUDIES, HWR BERLIN

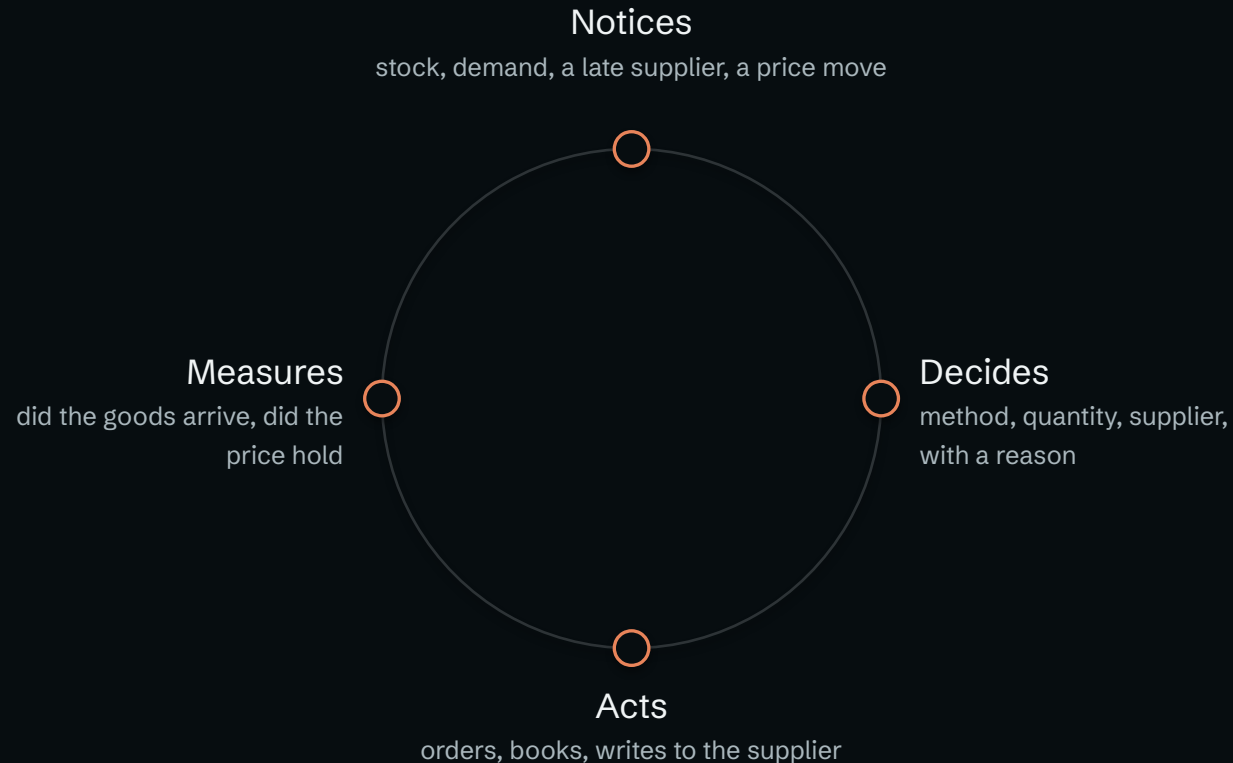

Arne Schildmeyer

CO - FOUNDER

10+ years of international supply chain management, including Heineken and Stone Brewing. Combines operations with digitalisation and automation.

B.A. BUSINESS, TH WILDAU

It does not answer questions about the business. **It runs it.**

WHAT IT DOES TODAY

Procurement	picks supplier and quantity, orders, chases delays
Stock	plans replenishment, books goods-in, counts, transfers
Production	explodes bills of materials, plans runs, books usage
Invoices	checks every line, records returns
Documents	reads a photo of the delivery note, prepares goods-in

The arithmetic runs in code. The AI judges, within limits it has earned.

Act and measure	orders, books, writes, then checks: did it work?
Limits	a level per area of work · hard limits for money, bank details, deletion
Judge	the AI adjusts the calculation by at most $\times 2$, and must give the reason
Calculate	reorder point, safety stock, order quantity: deterministic
Data	stock, orders, bills of materials, contracts: isolated per company

HOW IT EARNS TRUST

- Up one level after 20 good results and 14 days; down at once after one bad outcome
- Every decision is scored afterwards against what really happened
- A sequence it repeats becomes its own tool, tested before it may run
- The model sits behind one layer and can be swapped: the base for our own

The answer to “what if the AI gets it wrong?”, before the question is asked.

A working product. Not a roadmap.

Live at app.synapsio.solutions. Onboarding is an Excel export from the old system, no integration project.

Items & stock
What you carry, where it sits and how long it lasts.

Contract

APPROVAL WITH A DEADLINE AND A DEFAULT

Agents can finally act, at a price a 30-person company can pay.

40×

cheaper per year

EPOCH AI, MAR 2025

The price of GPT-4-level answers fell about 40× a year; 9× to 900× depending on the task.

2×

material shortages in four months

IFO, APR 2026

13.8% of German industry short of materials in April 2026, after 5.8% in January.

51%

of the Mittelstand re-sourcing

DZ BANK, N > 1,000, AUTUMN 2025

plan to buy closer to home, which means new suppliers to find, qualify and manage.

The window is open now, while every funded competitor sells to companies that already run SAP.

Today the Mittelstand chooses **between three compromises.**

ERP systems

SAP · OD00

- ✗ Record what happened, decide nothing
- ✗ Every order placed by a person
- ✗ Months of implementation

Agents on an ERP

OPUS · MERCANIS

- ✗ Need an ERP underneath
- ✗ Act on parts of the process, not the whole
- ✗ Sold to companies that already run SAP

Procurement suites

TACTO · COUPA

- ✗ Procurement only: no stock, no production
- ✗ Need an ERP underneath
- ✗ Built for departments, not for one buyer

Synapsio combines what each of them only half does.

SYNAPSIO

VS. ERP SYSTEMS

- ✓ Decides and acts on its own
- ✓ Orders alone, once it has earned it
- ✓ Starts from an Excel export

VS. AGENTS ON AN ERP

- ✓ Is the system: holds stock, orders, BOMs
- ✓ Runs the whole loop, notice to measure
- ✓ Built for 10 to 250 employees

VS. PROCUREMENT SUITES

- ✓ Procurement, stock and production in one
- ✓ No ERP needed underneath
- ✓ Built for one buyer, not a department

Investors are funding AI-native ERP right now: Rillet and Campfire raised over \$100M each in under a year, both for US finance teams. Nobody builds it for the operations of the Mittelstand.

RILLET, GLOBENEWSWIRE AUG 2025 • CAMPFIRE, PR NEWSWIRE OCT 2025

Procurement is the way in. The whole operation is the goal.

T O D A Y

Procurement, stock, production,
invoice checks

N E X T

Sales side: customer orders,
delivery-date promises; logistics
across sites

T H E N

Money view and pre-accounting:
e-invoices, handover to the tax
adviser

A F T E R

Sales and operations planning,
compliance, capacity

Each step takes over a larger part of the business, and the AI already knows the company when it gets there.

What Amazon did for consumers, **we build for the Mittelstand's purchasing.**

PLAN

Native app

For the floor: scan, photograph the delivery note, approve on the move.

PLAN

Marketplace

Find suppliers, order and pay through Synapsio. Every new company brings its suppliers.

PLAN

AI to AI

One company's buying AI negotiates with another's selling AI, within limits both set.

PLAN

Our own model

Trained on every decision and its outcome. No AI provider can replace us with a feature.

The marketplace is the upside, not the premise: the subscription case stands without it.

€20B a year addressable in the EU. Bottom-up.

THE MATH

Companies, EU, 10-249 employees	465,000
Manufacturing 318,709 · wholesale 145,876 · later retail +163,317 (Eurostat 2023)	
Subscription at today's blended price	€2.3B
€4,848 a year: 45% Start · 40% Base · 15% Advanced	
Marketplace, 1% of purchasing	€17.8B
Manufacturers alone buy €1.78T a year (Eurostat 2023)	

ARR 2032 · THREE CASES

Cautious	€23M
1% of companies · today's prices · no marketplace	
Plan	€145M
3% · today's prices · 10% at 1% (€7.8B volume)	
Ambition	€610M
6% · all on Advanced · 20% at 1% (€31.1B volume)	

HOW WE EARN · PER MONTH, NET

Start	Base	Advanced	Enterprise	Marketplace
€199	€449	€899	on request	1-1.5%
up to 300 items	up to 1,500 items	up to 6,000 items	no limit, priced per customer	per order, falls with volume

PRICE LADDER AS OF SEPTEMBER 2026 · SHARES, TIER MIX AND FEE ARE ASSUMPTIONS, NOT MEASUREMENTS

€410K

To turn a working product into the first paying customers, and to be seed-ready.

INSTRUMENT Convertible loan or SAFE

RUNWAY 18 months

MILESTONE 20 paying customers, ~€100K ARR

WHAT THE MONEY IS FOR

29 %	Product and engineering
49 %	Supply chain team and pilots
4 %	AI and infrastructure
17 %	Legal, finance, reserve
